BoardRent

The Board Game Rental Platform

User Management & Profile — Requirements

March 2026

Module	User Management & Profile

Status	Final

1. Scope

This module covers everything related to user identity and account management on the BoardRent platform: creating an account, signing in, managing a profile, and administering other users.

Out of scope: game listings, bookings, reviews, payments, and notifications.

2. Features & Requirements

Each feature below describes a distinct piece of functionality from the user's perspective. The requirements table under each feature lists what must be true for that feature to be considered complete. Requirements marked (Optional for this sprint) are nice-to-have but can be deferred if time is short.

2.1 Creating an Account

Account Registration	A new visitor can create a personal account on the platform so they can start using the app.

ID	Requirement / Acceptance Criterion
UM-001	A visitor can register by providing a display name, a chosen username, an email address, a password, and a password confirmation. All of these except phone number are required to complete registration.
UM-002	A display name must be between 2 and 50 characters long.
UM-003	A username must be between 3 and 30 characters and may only contain letters, numbers, and underscores.

UM-004	Each account must have a username that is unique across all accounts. No two users can share the same username.
UM-005	Each account must have an email address that is unique across all accounts. No two users can share the same email.
UM-006	A password must be at least 8 characters long and contain at least one uppercase letter, one number, and one special character.
UM-007	The visitor must enter their chosen password twice. Registration is only allowed if both entries match.
UM-008	A phone number may optionally be provided during registration. If provided, it must be a valid phone number format. (Optional for this sprint)
UM-009	If any required field is missing or does not meet its rules, the user is shown a clear error message directly next to that field. They are not redirected away from the registration screen.
UM-010	If the chosen username or email address is already in use, the user is told which one conflicts so they can correct only that field.
UM-011	Once registration is complete, the user is immediately signed in and can access the app. No email confirmation or extra steps are required.

2.2 Signing In

Sign In	A registered user can access their account by signing in with their credentials.

ID	Requirement / Acceptance Criterion
UM-012	A user can sign in using either their username or their email address combined with their password.
UM-013	After a successful sign-in, the user is taken to the main area of the app and their name and role are shown throughout.
UM-014	If sign-in fails for any reason, the user is shown a single generic message that the sign-in was unsuccessful. The message does not reveal whether the username, email, or password was the cause.
UM-015	After 5 consecutive failed sign-in attempts on the same account, that account is automatically locked for 15 minutes.
UM-016	While their account is locked, a user who attempts to sign in is shown a message explaining the lock and the exact time remaining until they can try again.
UM-017	A user can tick a 'Remember me' option on the sign-in screen. When selected, their username is pre-filled the next time they open the app so they do not have to type it again. Their password is never saved. (Optional for this sprint)

2.3 Session Management

Session Management	The app keeps track of who is signed in for as long as the application is open.

ID	Requirement / Acceptance Criterion
UM-S01	Once a user signs in, their identity (name, username, and role) is available throughout the entire app without needing to be re-fetched on every screen.

UM-S02	The session is active for as long as the app is open. Closing the app ends the session and the user must sign in again on next launch.
UM-S03	The session is cleared immediately when the user signs out. After sign-out no part of the app can access the user's identity.
UM-S04	The session is cleared immediately when the user changes their password. They must sign in again with the new password to continue.
UM-S05	No session information is ever written to disk. The session exists only in memory while the app is running.

2.4 Recovering Access

Forgotten Password	A user who cannot remember their password can get help to regain access to their account.

ID	Requirement / Acceptance Criterion
UM-018	A 'Forgot password?' option is visible on the sign-in screen at all times.
UM-019	When a user selects the forgotten password option, they are shown a message explaining that they need to contact an administrator to have their password reset. Contact details or instructions are included in the message.
UM-020	After an administrator resets a user's password, the user can sign in immediately using the new password without any additional steps.

2.5 Signing Out

Sign Out	A signed-in user can end their session and secure their account.

ID	Requirement / Acceptance Criterion
UM-021	A sign-out option is accessible from anywhere in the app at all times while the user is signed in.
UM-022	After signing out, the user is immediately returned to the sign-in screen. They cannot navigate back to any protected part of the app without signing in again.
UM-023	When a user successfully changes their password, they are automatically signed out straight away and must sign in again using their new password.

2.6 Managing Your Profile

Profile Management	A signed-in user can view and update the personal information stored on their account.

Personal details

ID	Requirement / Acceptance Criterion

UM-024	A user can view all the information stored on their account at any time: display name, username, email address, phone number, address, and profile picture.
UM-025	A user can update their display name, email address, and phone number at any time. The same format and length rules that apply during registration apply here too.
UM-026	A user's username is shown on the profile page but cannot be edited after the account has been created.
UM-027	When a user saves changes to their personal details, the updated information is reflected on the screen immediately.
UM-028	If a user tries to save an email address that is already used by another account, they are told the address is already taken.

Address

ID	Requirement / Acceptance Criterion
UM-029	A user can view their address on their profile page: country, city, street name, and street number.
UM-030	A user can update their country, city, street name, and street number at any time.
UM-031	Country must be selected from a predefined list. City, street name, and street number are free-text fields.
UM-032	Street number must be a valid value (non-empty, reasonable format). If invalid, the user is shown an error next to that field. (Optional for this sprint)
UM-033	Address fields are optional — a user can save their profile without filling in an address. (Optional for this sprint)

Profile picture

ID	Requirement / Acceptance Criterion
UM-034	A user can upload an image file as their profile picture. (Optional for this sprint)
UM-035	Only image files are accepted for the profile picture. If a non-image file is selected, the user is shown a clear error. (Optional for this sprint)
UM-036	Before the upload is confirmed, the user is shown a preview of how the picture will look on their profile. (Optional for this sprint)
UM-037	A user can remove their current profile picture at any time. When removed, a default placeholder image is shown in its place. (Optional for this sprint)

Password

ID	Requirement / Acceptance Criterion
UM-038	A user can change their password from their profile settings.
UM-039	To change their password, the user must enter their current password first. If the current password entered is wrong, the change is rejected and the user is told it was incorrect.
UM-040	The new password must meet the same strength rules defined in UM-006. The user must enter it twice and both entries must match.

2.7 Managing Users (Administrator)

User Administration	An administrator can oversee all accounts on the platform and take action on them when needed.

Roles and access

ID	Requirement / Acceptance Criterion
UM-041	Every account on the platform has one of two roles: Standard User or Administrator.
UM-042	Administrator accounts have access to the user management area. Standard users do not.
UM-043	If a standard user attempts to reach the user management area, they are shown a message that they do not have permission to access it.

User overview

ID	Requirement / Acceptance Criterion
UM-044	An administrator can view a list of all registered accounts. For each account the list shows the display name, email address, username, and current status (active or suspended).
UM-045	The user list can be browsed when there are many accounts, so that the screen does not become unusable with a large number of users. (Optional for this sprint)

Account actions

ID	Requirement / Acceptance Criterion
UM-046	An administrator can suspend any user account. A suspended account cannot be used to sign in.
UM-047	When a suspended user attempts to sign in, they are shown a message clearly stating that their account has been suspended.
UM-048	An administrator can lift a suspension on any account, restoring the user's ability to sign in.
UM-049	An administrator can reset the password of any account. The user can then sign in with the new password the administrator sets.
UM-050	An administrator can manually unlock any account that has been locked due to too many failed sign-in attempts, without waiting for the 15-minute period to expire. (Optional for this sprint)
